

ABSTRACT

A tablet storing/retrieving device which stores a plurality of kinds of many medicines, and fills as many tablets of such descriptions as designated by prescription data into a vial (3) and retrieves it, wherein an imaging
5 means (400) is provided for photographing the interior of the vial before a cap is set to the vial (3) after tablets are filled into the vial (3). Accordingly, a quick, easy auditing is possible without removing the cap of a retrieved vial.
